### 2020 Water Quality Drinking Report

This report contains important information about your drinking water. Have someone translate it for you, or speak with someone who understands it.

**(Spanish)** Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien.

**(Hmong)** Daim ntawv teev num no muaj cov ntaub ntawv tseem ceeb hais txog koj cov dej haus. Nrhaiv ib tug neeg pab txhais cov ntaub ntawv no rau koj, lossis tham nrog ib tug neeg uas paub cov lus no.

**(Somali)** Warbixintan waxay wadataa macluumaad muhiim ah ee la xiriira biyaha aad cabtid. Cid ha kuu tarjunto ama la hadid cid fahmaysa.

**(Vietnamese)** Tài liệu này có tin tức quan trọng về nước uống của quý vị. Hãy nhờ người dịch cho quý vị, hoặc hỏi người nào hiểu tài liệu này.

### Keeping You Informed

Fridley drinking water continues to meet all State and Federal standards. The City of Fridley is issuing the results of monitoring done on its drinking water for the period from January 1 to December 31, 2020. The purpose of this report is to provide you with information on your drinking water and how to protect our precious water resources.

### Making Safe Drinking Water

Your drinking water comes from a groundwater source: eleven wells ranging from 199 to 870 feet deep, that draw water from the Prairie Du Chien-Jordan, Prairie Du Chien Group, Mt. Simon, Tunnel City – Mt. Simon, Quaternary Buried Artesian and Jordan aquifers. The City of Fridley also obtains treated water from the City of New Brighton under a beneficial re-use program. This water supply was re-established in late 2018 after the City of New Brighton's new augmented treatment system went online.

Fridley works hard to provide you with safe and reliable drinking water that meets federal and state water quality requirements.

The U.S. Environmental Protection Agency sets safe drinking water standards. These standards limit the amounts of specific contaminants allowed in drinking water. This ensures that tap water is safe to drink for most people. The U.S. Food and Drug Administration regulates the amount of certain contaminants in bottled water. Tap water and bottled water generally have the same quality standards, but water from a public water system like yours is tested more thoroughly and regulated more closely than water from any other source, including bottled water. See [Bottled Water: Questions and Answers](#) for more information.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

**If we detect a problem, we take protective action. We notify you if there are related health risks.**

#### **Questions, Concerns or Want to Get Involved?**

Call (763) 572-3554 if you have questions about the City of Fridley's drinking water or would like information about opportunities for public participation in decisions that may affect the quality of your drinking water.

#### **Working for You**

The Fridley Water Division maintains the operation of its wells, 4 reservoirs and 3 filtration plants. In 2020, the City completed construction of the highly anticipated Locke Park Water Treatment Plant Improvement Project. This plant has the capacity of 2.9 million gallons of treated drinking water daily. The project improved reliability and treatment, as well as providing benefit to the environment. Improvements centered on a new water reclaim system that maximizes water reuse. In addition to water conservation, the plant improvements reduce annual power usage. Other improvements included filter rehabilitation with new media that improves the water treatment process, plant safety upgrades, and site work for new driveways to access the facilities.

In 2020 the City continued its expanded hydrant flushing and testing program that will provides additional assurance that privately-owned hydrants are functional and available for an emergency. The program also includes pressure and volume testing to verify underground water piping systems are functioning properly.

## **2020 by the Numbers**

The City of Fridley's 2020 water by the numbers are as follows:

- Average of 3.37 million gallons of drinking water treated per day.
- 1.075 billion gallons of clean drinking water sold
- Residential usage = 60 gallons per capita per day (conservation goal is <75 gpcd)
- Water losses due to leakage, hydrant use, etc. = 8.6% (conservation goal is <10%)
- 18 watermain breaks repaired and 32 service leaks repaired.
- Total Hardness: 205-290 mg/l or 12-17 grains/gal. About half the homes in Fridley use a water softener.

## **The Value of Water**

Water is key to healthy people and communities. Water is also vital to our economy. Systems are in place to provide you with clean drinking water. The state of Minnesota and City of Fridley work to protect your drinking water sources. For example, we work to seal unused wells to prevent contamination of the groundwater. We treat water to remove harmful contaminants, and we do extensive testing to ensure the safety of your drinking water.

## **Fridley Monitoring Results**

We work with the Minnesota Department of Health to test drinking water for more than 100 contaminants. It is not unusual to detect contaminants in small amounts. No water supply is ever completely free of contaminants. Drinking water standards protect Minnesotans from substances that may be harmful to their health.

Learn more by visiting the Minnesota Department of Health's webpage

[Basics of Monitoring and testing of Drinking Water in Minnesota.](#)

We sample for some contaminants less than once a year when levels are consistent from year to year. If we found any of these contaminants the last time we sampled for them, we included them in the table at the end of this report.

The City of Fridley performs additional monitoring for contaminants that are not included in the Safe Drinking Water Act. To request a copy of test results, contact the City of Fridley at 763-572-3554 or the Minnesota Department of Health at 651-201-4700 or 1-800-818-9318.

## **Supplemental Contaminant Monitoring**

The City of Fridley performs supplemental monitoring of regulated and unregulated contaminants to ensure that your drinking water is clean and safe. No contaminants were detected at

levels that violated Federal drinking water standards or exceeded Minnesota Department of Health risk guidelines. Supplemental monitoring performed in 2020 included regular testing for contaminants that have impacted the city's wells recently and historically. Monitoring for Trichloroethylene (TCE) indicated no detection in treated water or active wells in 2020. The City of Fridley continues to monitor the concentration of 1,4-Dioxane in multiple wells, and trace levels were found. These were six times below the most protective health standard. Most recently, one city well was impacted by Perfluoroalkyl Substances (PFAS) and was immediately taken out of service in late 2016. The City of Fridley is continuing to work to identify and eliminate sources of these contaminants impacting specific well sources.

## Unregulated Substances

In addition to testing drinking water for contaminants regulated under the Safe Drinking Water Act, we sometimes also monitor for contaminants that are not regulated. Unregulated contaminants do not have legal limits for drinking water.

Detection alone of a regulated or unregulated contaminant should not cause concern. The meaning of a detection should be determined considering current health effects information. We are often still learning about the health effects, so this information can change over time.

The table at the end of this report shows the unregulated contaminants we detected last year, as well as human-health based guidance values for comparison, where available. The **Comparison Values** are based on potential health impacts and do not consider our ability to measure contaminants at very low concentrations or the cost and technology of prevention and/or treatment. They may be set at levels that are costly, challenging, or impossible for water systems to meet (for example, large-scale treatment technology may not exist for a given contaminant).

A person drinking water with a contaminant at or below the comparison value would be at little or no risk for harmful health effects. If the level of a contaminant is above the comparison value, people of a certain age or with special health conditions - like a fetus, infants, children, elderly, and people with impaired immunity - may need to take extra precautions. Because these contaminants are unregulated, EPA and MDH require no particular action based on detection of an unregulated contaminant. We are notifying you of the unregulated contaminants we have detected as a public education opportunity. More information is available on MDH's [A-Z List of Contaminants in Water](#) and [Fourth Unregulated Contaminant Monitoring Rule \(UCMR4\)](#).

## Definitions

**AL (Action Level):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**EPA:** Environmental Protection Agency

**MCL (Maximum contaminant level):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**MCLG (Maximum contaminant level goal):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**MRDL (Maximum residual disinfectant level):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**MRDLG (Maximum residual disinfectant level goal):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**N/A (Not applicable):** Does not apply.

**pCi/l (picocuries per liter):** A measure of radioactivity.

**ppb (parts per billion):** One part per billion in water is like one drop in one billion drops of water, or about one drop in a swimming pool. ppb is the same as micrograms per liter ( $\mu\text{g}/\text{l}$ ).

**ppm (parts per million):** One part per million is like one drop in one million drops of water, or about one cup in a swimming pool. ppm is the same as milligrams per liter ( $\text{mg}/\text{l}$ ).

**PWSID:** Public water system identification.

**Variations and Exemptions:** State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

The table at the end of this report shows the contaminants we found last year or the most recent time we sampled for that contaminant. It also shows the levels of those contaminants and the EPA limits. Substances that we tested for but did not find are not included in the table.

## Fluoride in Drinking Water

Fluoride is nature's cavity fighter, with small amounts present naturally in many drinking water sources. There is an overwhelming weight of credible, peer-reviewed, scientific evidence that fluoridation reduces tooth decay and cavities in children and adults, even when there is availability of fluoride from other sources, such as fluoride toothpaste and mouth rinses. Since studies show that optimal fluoride levels in drinking water benefit public health, municipal community water systems are required to adjust the level of fluoride in the water to a concentration between 0.5 to 0.9 parts per million (ppm) to protect your teeth. Fluoride levels below 2.0 ppm are not expected to increase the risk of a cosmetic condition known as enamel fluorosis.

Fluoride: If your drinking water fluoride levels are below the optimal concentration range of 0.7 to 1.2 ppm, please talk with your dentist about how you can protect your teeth and your family's teeth from tooth decay and cavities. For more information, visit:

[MDH Drinking Water Fluoridation.](#)

## Lead in Drinking Water

The City of Fridley was required to perform lead and copper testing in 2020. Our testing results were fully compliant with standards, with no homes testing at high levels (exceeding Action Levels).

We did fail to provide lead and copper results to persons served at the sites that were tested within the timeframes required by the Lead and Copper Rule. We have completed these notice requirements and were Returned to Compliance on 03/16/20. The City's drinking water has always been compliant with testing standards, but you should read the following to help and avoid and reduce your health risk.

You may be in contact with lead through paint, water, dust, soil, food, hobbies, or your job. Coming in contact with lead can cause serious health problems for everyone. There is no safe level of lead. Babies, children under six years, and pregnant women are at the highest risk.

Lead is rarely in a drinking water source, but it can get in your drinking water as it passes through lead service lines and your household plumbing system. Fridley is responsible for providing high quality drinking water, but it cannot control the plumbing materials used in private buildings.

Read below to learn how you can protect yourself from lead in drinking water.

1. **Let the water run** for 30-60 seconds before using it for drinking or cooking if the water has not been turned on in over six hours. If you have a lead service line, you may need to let the water run longer. A service line is the underground pipe that brings water from the main water pipe under the street to your home.
  - You can find out if you have a lead service line by contacting your public water system, or you can check by following the steps at: [Are Your Pipes Made of Lead?](#)
  - The only way to know if lead has been reduced by letting it run is to check with a test. If letting the water run does not reduce lead, consider other options to reduce your exposure.
2. **Use cold water** for drinking, making food, and making baby formula. Hot water releases more lead from pipes than cold water.
3. **Test your water.** In most cases, letting the water run and using cold water for drinking and cooking should keep lead levels low in your drinking water. If you are still

concerned about lead, arrange with a laboratory to test your tap water. Testing your water is important if young children or pregnant women drink your tap water.

- Contact the City of Fridley Water Division staff at (763) 572-3566 and ask to assist you in getting your water tested for lead; we will coordinate testing and share the nominal cost of testing with you, or
- Contact a Minnesota Department of Health accredited laboratory to get a sample container and instructions on how to submit a sample: [Search for an Accredited Lab](#)  
The Minnesota Department of Health can help you understand your test results.

4. **Treat your water** if a test shows your water has high levels of lead after you let the water run.

- Read about water treatment units: [Point-of-Use Water Treatment Units for Lead Reduction](#)

Learn more:

- Visit [Lead in Drinking Water](#)
- Visit [Basic Information about Lead in Drinking Water](#)

Call the EPA Safe Drinking Water Hotline at 1-800-426-4791. To learn about how to reduce your contact with lead from sources other than your drinking water, visit [Lead Poisoning Prevention: Common Sources](#)

## Persons Vulnerable to Contaminants in Drinking Water

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. The developing fetus and therefore pregnant women may also be more vulnerable to contaminants in drinking water. These people or their caregivers should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

***Please see the monitoring results for 2020 on the following page.***

**The following are the monitoring results for 2020:**

DETECTED COMPOUNDS (DATE, IF SAMPLED IN PREVIOUS YEAR) CONTAMINANT NAME		EPA LIMITS GOAL (MCLG) MAXIMUM (MCL)		FRIDLEY DRINKING WATER LEVELS RESULT* RANGE		NEW BRIGHTON DRINKING WATER LEVELS RESULT* RANGE		VIOLATION	TYPICAL SOURCES
UNITS									
Nitrate	(ppm)	10	10.4	0.10	0.00 - 0.10	0.22	0.00 - 0.22	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Combined Radium (2017)	(pCi/l)	0	5.4	2.8	N/A	--	--	No	Erosion of natural deposits.
Barium	(ppm)	2	2	0.10	0.03 - 0.10	0.07	0.00 - 0.07	No	Discharge of drilling wastes and metal refineries; Erosion of natural deposits.
Mercury (2019)	(ppb)	2	2	--	--	0.03	0.00 - 0.03	No	Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from cropland.
TTHM (Total trihalomethanes)	(ppb)	N/A	80	1.0	0.9 - 1.0	15.40	5.80 - 15.40	No	By-product of drinking water disinfection.
2,4-D	(ppb)	70	70	0.12	0.00 - 0.12	--	--	No	By-product of drinking water disinfection.
Fluoride	(ppm)	4	4	0.72	0.70 - 0.75	0.82	0.74 - 0.82	No	Erosion of natural deposits; Water additive to promote strong teeth.
Xylenes	(ppm)	10	10	0.0015	0.0000 - 0.0015	--	--	No	Discharge from petroleum factories; Discharge from chemical factories.
TCE (Trichloroethylene) <sup>(a)</sup>	(ppb)	0	5 <sup>(b)</sup>	ND	ND <sup>(c)</sup>	--	--	No	Discharge from metal degreasing sites and other factories.
1,4-Dioxane <sup>(a)</sup>	(ppb)	No EPA Limit Established <sup>(d)</sup>		ND	ND	0.05	0 - 0.05 <sup>(e)</sup>	No	Discharge from metal degreasing sites and other factories.
PFAS <sup>(a)</sup>	(ppb)	No EPA Limit Established <sup>(f)</sup>		--	-- <sup>(g)</sup>	--	--	No	Manmade chemicals that have been used for decades to make products that resist heat, oil, stains, grease and water.
		<b>GOAL (MRDLG)</b>	<b>MAXIMUM (MRDL)</b>	<b>HIGH AVG QUARTER</b>	<b>HIGH/LOW AVG MONTH</b>	<b>HIGH AVG QUARTER</b>	<b>HIGH/LOW AVG MONTH</b>		
Total Chlorine	(ppm)	4.0	4.0	1.24	0.93 - 1.37	--	--	No	Water additive used to control microbes.
		<b>GOAL (MCLG)</b>	<b>MAXIMUM 90% (AL)</b>	<b>90% LEVEL</b>	<b># OF HOMES W/ HIGH LEVEL</b>	<b>90% LEVEL</b>	<b># OF HOMES W/ HIGH LEVEL</b>		
Copper	(ppm)	0	1.3	0.8	0 out of 30	0.32	0 out of 30	No	Corrosion of household plumbing.
Lead	(ppb)	0	15	1.3	0 out of 30	3.7	0 out of 30	No	Corrosion of household plumbing.
<b>UNREGULATED SUBSTANCES</b>		<b>COMPARISON VALUE</b>		<b>HIGH AVG / HIGH SINGLE RESULT</b>	<b>RANGE</b>	<b>HIGH AVG / HIGH SINGLE RESULT</b>	<b>RANGE</b>		
Sodium <sup>(h)</sup>	(ppm)	20		55	N/A	--	--	No	
Sulfate	(ppm)	500		16.6	N/A	--	--	No	
1-Butanol	(ppb)	700		23.8	0.00 - 23.80	--	--	No	
2-Methoxyethanol	(ppb)	0		0.27	0.00 - 0.55	--	--	No	
Manganese	(ppb)	100		23.8	3.20 - 27.90	--	--	No	
Haloacetic Acids (HAA6Br)	(ppb)	N/A		0.25	0.00 - 0.58	1.93	0.91 - 3.10	No	
Haloacetic Acids (HAA9))	(ppb)	N/A		0.66	0.00 - 1.67	2.77	1.53 - 4.68	No	

\* Results are values used to determine compliance with federal standards. They sometimes are the highest value detected and sometimes are an average of all the detected values. If an average is used, results may include sampling from the previous year.

<sup>(a)</sup> Results from City of Fridley supplemental monitoring.

<sup>(b)</sup> The Minnesota Department of Health has set a Health Risk Limit of 0.4 ppb for TCE. For further information, please see this link:

<https://www.health.state.mn.us/communities/environment/risk/docs/guidance/gw/tceinfosheet.pdf>

<sup>(c)</sup> No detection in all raw water well sampling in 2020.

<sup>(d)</sup> The Minnesota Department of Health has set a Health Risk Limit of 1 ppb for 1,4-Dioxane. For further information, see this link:

<https://www.health.state.mn.us/communities/environment/risk/docs/guidance/dwec/dioxaneinfo.pdf>

<sup>(e)</sup> No detection from sampling at interconnection point in Fridley.

<sup>(f)</sup> The Minnesota Department of Health has set a Health Based Value of 0.035 ppb. For further information, see the following link:

<https://www.health.state.mn.us/communities/environment/hazardous/docs/pfashealth.pdf>

<sup>(g)</sup> Note that the one well that sampled above 0 for PFAS has been removed from service due to the presence of PFAS.

<sup>(h)</sup> Note that home water softening can increase the level of sodium in your water.
